CONVERSION TO METRIC UNITS OF MEASUREMENT

Quantity data originally expressed in imperial units in this publication are now (as far as possible) expressed in metric units of measurement. The factors which have been used in converting figures from imperial units to metric units (and the abbreviations used for the metric units) are shown below. In each case, the imperial unit is multiplied by the factor given.

Imperial unit	Conversion factor	Metric unit	
acre	0.404686	hectare	(ha)
cental	45.3592	kilogram	(kg)
gallon	4.54609	litre	(1)
gallon	0.00454609	cubic metre	(cu m)
hundredweight	50.802345	kilogram	(kg)
hundredweight	0.050802345	tonne	(t)
mile	1.609344	kilometre	(km)
pound	0.45359237	kilogram	(kg)
ton	1.016047	tonne	(t)

(NOTE. 1 tonne = 1,000 kilograms; 1 hectare = 2.5 acres approx.; 1 kilogram = 2.2 lb approx.; 1 litre = 0.22 gal approx.; 1 kilometre = 0.62 mile approx.; 1 cubic metre = 220 gal approx.)

The production of cereals and certain other commodities is generally recorded in bushels. The weight of a bushel varies according to the nature of the product. The average bushel equivalent weights and conversion factors to convert bushels to tonnes are shown below. In each case the number of bushels is <u>divided</u> by the factor shown.

Commodity	Weight per bushel	Conversion factor
	(lb)	
Barley	50	44.0924
Field peas	60	36,7437
Lupins	60	36,7437
Maize	56	39.3682
Oats	40	55.1155
Rape	56	39,3682
Rye	60	36.7437
Sorghum	60	36,7437
Wheat	64	36.7437

ROUNDING OF FIGURES

Many of the figures appearing in the tables have been rounded to the nearest unit (e.g. hectare, kg, etc.) without making those adjustments which would be needed to make the rounded figures add to the rounded total. It is for this reason that figures do not always add to the totals shown in the tables.

Percentages appearing in Tables 39 and 42 have been corrected to the first place of decimals without making any adjustment which would be necessary to make the percentages so expressed add to precisely 100.

SOURCES OF INFORMATION

1. The statistics relating to agriculture and livestock appearing in this publication are, in the main, compiled from statutory returns supplied annually at 31 March by occupiers of rural holdings in Western Australia. A copy of the Agricultural Census return can be found at the back of this publication. Additional information is obtained from entirely separate collections covering slaughtering and bee keeping and from various authorities.

PERIOD COVERED

- 1. Data relating to area sown, production, yield per hectare and number of holdings growing crops are, in general, for the season ended 31 March. In cases where harvesting has not been completed by 31 March (e.g. potatoes, apples, pears, grapes) total production, including quantities harvested after 31 March, is recorded. A seasonal calendar showing approximate times of sowing or planting, harvesting, lambing and shearing appears on page 8 of this publication.
- 2. Livestock numbers and particulars of farm machinery are as at 31 March. Wool production is for the year ended 31 March and in some instances for the year ended 30 June. Egg production is for the year ended 31 March. Poultry and livestock slaughterings are for the year ended 30 June. Statistics of bee keeping relate to hives as at 30 June and production for the year ended 30 June.

DEFINITIONS AND EXPLANATORY NOTES

1. RURAL HOLDINGS - For statistical purposes a 'rural holding' is defined as a piece of land of one hectare or more in extent, used for the production of agricultural products (including fruit and vegetables, nursery plants, etc.) or for the raising of livestock (including poultry) and the production of livestock products. Holdings of less than one hectare on which commercial market gardens, nurseries, poultry farms or hatcheries are operated are also included.

An occupier who works more than one holding is generally required to supply a separate annual return for each holding, particularly if the holdings are situated in different local government areas. If, however, the holdings are not far apart and are worked as one, the occupier may (and in most instances does) supply a single composite return covering the holdings concerned. The holdings covered by a composite return are treated, for statistical purposes, as forming a single rural holding. Where a holding extends into two or more local government areas, the holding and all operations on it are attributed to the local government area in which the homestead is located.

2. AREA OF CROPS - The total area of land sown or planted to crops is shown irrespective of whether the whole area was harvested or whether a portion or the whole of the crop failed and was not harvested. In the case of fruit and vegetables, only commercial areas are included.

Where two successive crops are grown on the same land during one season, the land is included twice in area of crops except in Tables 3 and 38 where it is counted once only in 'Cleared land used for crops'.

No data on the area planted to individual types of orchard fruits are collected but estimates, based on the reported total area of orchard and the number of trees of each variety planted, are made and shown in Tables 10 and 38.

- 3. AVERAGE YIELD PER HECTARE Figures appearing in this publication relate to average yield per hectare sown or planted. Areas of crops harvested are not recorded and consequently particulars of yields per hectare harvested are not available. In the case of apples, pears and oranges, yields are shown in terms of 'per hectare of bearing trees'.
- 4. EMPLOYMENT ONRURAL HOLDINGS Details are collected in the Agricultural Census of persons working on rural holdings at 31 March. Although the employment information compiled from the Census has been published in previous issues of this publication, increasing difficulty has been encountered in obtaining data on a comparable basis from year to year. As these difficulties have become sufficiently serious to affect the validity of inter-year comparisons, information in respect of employment has been withdrawn from general publication.
- 5. LIVESTOCK SLAUGHTERED Monthly returns are collected from principal slaughterers and these, together with annual returns from all other slaughterers (a special return from country butchers and the general census return from farmers and pastoralists) provide the necessary data for compiling estimates of all livestock slaughtered.
- 6. BUSHEL WEIGHTS The production of fruit is generally recorded in bushels. While the weight of a bushel varies according to the nature of the product, it is also subject to considerable variation on account of such factors as method of packing and size and variety within each kind of product. The average bushel equivalent weights set out below may be used to convert production to kilograms.

Product	Weight per bushel	Product	Weight per bushel	Product	Weight per bushel
	kg		kg		kg
Apples	19	Lemons	22	Passion fruit	15
Apricots	22	Loquats	20	Peaches	20
Bananas	25	Mandarins	22	Pears	20
Cherries	22	Nectarines	23	Plums	26
Figs	20	Olives	25	Quinces	19
Grapefruit	19	Oranges	22	Tomatoes	20

7. CONVERSION FACTORS - The production of vegetables has been shown in reported units or in reported units rounded to the nearest thousand. The average unit equivalent weights set out below may be used to convert production to kilograms.

Product	Unit	Weight	Product	Unit	Weight
		kg			kg
Cabbages	crate	23	Rhubarb	bundle	11
Cauliflowers	dozen	23	Rock melons	box	18
Celery	doz heads	14	Silver beet and Spinach	doz bunches	7
Cucumbers	dozen	4	Sweet corn	doz cobs	3
Lettuce	crate	11	Tomatoes	$\frac{1}{2}$ bush case	10
Pumpkins	bag	51	Water melons	dozen	61
Radishes	doz bunches	5			

STATISTICAL DIVISIONS AND LOCAL GOVERNMENT AREAS

1. From 1929-30 Western Australian statistics of agriculture and livestock have been tabulated according to local government areas. In this publication, in the tables where information for separate local government areas is published, the district designations and names used are those which were current at 31 March 1973. Changes which occurred during the season 1972-73 are as follows:

The name of the Shire of Nyabing-Pingrup was changed to the Shire of Kent, with effect from 1 December 1972.

- The Shire of West Pilbara was constituted, with effect from 27 May 1972, by uniting the Shires of Ashburton and Tableland and by severance of territory from the Shires of Carnarvon, Roebourne and Upper Gascoyne.
- The Shire of East Pilbara was constituted, with effect from 27 May 1972, by uniting the Shires of Marble Bar and Nullagine and by severance of territory from the Shires of Port Hedland, Tableland and Wiluna.

As the formation of the Shires of East Pilbara and West Pilbara altered the common boundary between the North-West and Pilbara Statistical Divisions, separate figures for these divisions are not now available. Consequently, in this publication the component local government areas have been listed under the single heading 'North-West and Pilbara Statistical Divisions'. The changes to boundaries in these divisions are such as to make valid comparison of statistical data for the periods before and after the change impossible in respect of local government areas.

- 2. Local government areas of the State are grouped into nine Statistical Divisions and a table showing the Cities, Towns and Shires comprising these divisions at 31 March 1973 is shown on page 97.
- 3. Data relating to agriculture and livestock in local government areas outside the Perth Statistical Division which are designated 'Towns' are combined with those for the surrounding or adjacent Shire (except in the case of the Town of Bunbury, for which separate figures are shown). Thus, particulars for the Towns of Albany, Narrogin and Northam are included with those for the Shires of the same name; those for the Town of Geraldton with the Shire of Greenough; and those for the Town of Kalgoorlie with the Shire of Boulder. Separate statistics of agriculture and livestock are not compiled for the Cities of Fremantle, Melville, Nedlands, Perth, South Perth, Stirling and Subiaco; the Towns of Canning, Claremont, Cottesloe, East Fremantle and Mosman Park; and the Shires of Bassendean, Bayswater, Belmont and Peppermint Grove. Totals for these areas are shown in the relevant tables under 'Other districts' in the Perth Statistical Division. Separate statistics for the Shire of Exmouth are not available for publication. Information for that Shire has been combined with data for the Shire of Carnaryon.
- 4. In tables where data for Statistical Divisions and local government areas are shown, the former are indicated thus: PERTH; local government areas thus: Armadale-Kelmscott.

SPECIAL ANALYSIS

- 1. Size and Type Classification of Rural Holdings, Season 1968-69 Special tabulations relating to the classification of rural holdings by type of farming activity and size of principal activities appear in a publication, issued by the Commonwealth Statistician, Canberra, which is available for reference at the Office of the Deputy Commonwealth Statistician for Western Australia.
- 2. Tractor Classification, Season 1968-69 Special tabulations relating to the classification of tractors by type of fuel used, horsepower and age of tractor appear in a publication issued by this Office. A range of tractor statistics for Western Australia were published in the 1969-70 issue of 'Rural Industries'.
- 3. Grain and Seed Harvesters at 31 March 1970 A range of tabulations relating to the classification of grain and seed harvesters by type of harvester, type of front and width of cut appear in the 1969-70 edition of this publication.
- 4. Breeds of Sheep, Season 1970-71 A special table relating to breeds of sheep by local government areas appears in the 1970-71 edition of this publication. There also appears a summary table for Western Australia showing details at 31 March 1965, 1968 and 1971.
- 5. Month of Shearing 1971-72 A special table relating to the month of shearing by local government areas was published in the 1971-72 edition of 'Rural Industries'.

The following calendar is intended to show the main periods when principal agricultural and pastoral activities are carried out in Western Australia. Operations are generally confined to the periods shown but are subject to variation according to such factors as geographical location within the State, the variety of seed sown (or trees and vines planted) and exceptional seasonal conditions.

(a) See EXPLANATORY NOTES. (b) Excludes areas of sown pastures and of lucerne cut for hay or harvested for seed for 1971-72 and 1972-73. (c) Collected and published under the term 'established pasture' prior to 1971-72. (d) Included in land 'used for crops'. (e) Not collected. (f) Not available for publication. (g) Includes Sudans, Sweet Sorghums, all Hybrid Sorghums, etc. (h) Not available separately prior to 1971-72. See footnote (e).

(i) Collection of data commenced for first season shown. (j) Separate details not available; included in 'other crops'. (k) See footnote (j). (1) Includes superphosphate with trace elements. (m) Includes Urea, Anhydrous Ammonia, Ammonium Nitrate. (n) Includes beans for processing. (o) Includes peas for processing. (p) Comprises swede and white. (q) Area under bearing and non-bearing trees. (r) Includes spirit produced from distillation wine and used in fortification. (s) Excludes non-commercial nurseries. Information on a comparable basis not available prior to 1971-72. (t) The value at the holding, after deducting cost incurred in marketing. (u) Includes steers, (v) Separate details not collected prior to 1971. (w) Includes ewes intended for mating. (x) As reported on census returns for each preceding season; represents matings for lambing in years shown. Intended matings for 1972-73 are presented as a possible basis for forecasting the number of lambs to be marked for that season. In making such estimates, account should be taken of past relationships between intended and actual matings - see 'Lambing - Ewes mated' above. (y) Relates to livestock slaughtered at abattoirs and country butcheries and on farms and stations. Meat production represents dressed carcass weight. Excludes offal. (z) Factory production only. (aa) Source: Commonwealth Dairy Produce Equalisation Committee Limited. (bb) Includes estimated equivalent of whole milk used in the production of butter, cheese and condensery products. (cc) Source: Western Australian Egg Marketing Board. (dd) Includes headers and strippers; excludes reapers, binders and specialised clover harvesters. * Revised.

(Excluding Mining)

SOURCES

Value of production statistics for primary industries are computed by the Statisticians in each State, in accordance with the decisions reached at Conferences of Australian Statisticians. The data used are those concerning quantity of primary production together with information collected from various sources on prices realised in the principal markets for the different products, the costs of marketing those products and the costs of certain materials used in their production.

The method of collection of the prices realised for and the costs of marketing of the products of rural industries varies considerably between products. Where a statutory authority handles marketing of the whole or portion of a primary product in the State (e.g. Australian Wheat Board, Western Australian Egg Marketing Board, etc.) data are usually obtained from this source. Other information is obtained from market reports, from special returns collected from wholesalers, brokers, auctioneers and in some cases from farms, from annual factory returns (showing cost of raw materials delivered to factory), from various transport records and from overseas and interstate trade statistics. There is also considerable variation between industries in the method of collecting information on costs of materials used in the process of production (no attempt being made to allocate these costs to individual products). In addition, accurate information on certain costs and for particular products or industries is very difficult to obtain.

For calculating value of production of the non-rural primary industries, information is obtained, in the case of hunting, forestry, and fishing, from annual factory returns (showing cost of raw materials delivered to factory), overseas and interstate trade statistics, from fish auctioneers, merchants and processors and from State Forestry and Fisheries Authorities.

PERIOD COVERED

The period covered for individual rural industries is referred to on page 6 of this publication. Statistics for the non-rural primary industries included refer to the year ended 30 June. For primary industries included in these tables, values are in respect of production during the year (or season) irrespective of whether or when that production is actually marketed or when payments are made. For that portion of production not marketed (e.g. hay grown on farm for own use, etc.) estimates are made from the best available data.

DEFINITIONS OF TERMS USED

Gross Value is the value placed on recorded production at the wholesale price realised at the principal market. In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are taken as the principal markets.

Marketing Costs comprise freight, cost of containers, commission, and other charges incurred in marketing.

Local Value is the value recorded at the place of production, and is obtained by deducting Marketing Costs from Gross Value.

Cost of Goods Consumed in the Process of Production covers seed and fertilisers used, pickling, sprays, dips, fodder consumed, fuel and oil, and other selected costs of a similar nature.

Net Value represents the return to the producer (farmer, pastoralist, fisherman, etc.) and is the sum available for payment of wages, interest, rent, depreciation, other overhead costs, and for the producer's own income. It is obtained by deducting from Local Value the Cost of Goods Consumed in the Process of Production.

Gross and Local Values of primary production involve some duplication as they include the products of certain primary industries which are consumed as raw materials by other industries in the group (e.g. hay consumed by livestock). Furthermore, many of the materials consumed by primary industries are the products of secondary industry. However, duplication has been eliminated in calculating the Net Value of primary production by deducting the cost of both primary and secondary products consumed by primary industries. Therefore, Net Value of primary production should be used when comparing values of primary industries covered in this publication. It should be noted also that in some industries, principally Forestry and Agriculture (viticulture), there are some duplications in the measurement of components of certain activities which are covered both in the computation of Net Value for Primary Production and Added Value for the Manufacturing sector of the Economic Censuses.

⁽a) Preliminary; subject to revision. (b) Eay, all kinds. (c) Includes beans for processing. (d) Includes peas for processing. (e) Less than \$500. (f) Includes value of wool deficiency payments. (g) The value of sheep and lambs slaughtered below has been computed from prices 'on hoof' at principal markets and therefore includes a value for wool on skins. Values of fellmongered wool and wool exported on skins have been estimated separately to arrive at a gross value for total wool production. (h) The value of calves slaughtered is included under Dairying. (i) Comprises net exports (overseas and interstate) of cattle and sheep and hides and skins from dead stock. (j) Prior to 1971-72, figures include milk used on farms. (k) Comprises net exports (overseas and interstate) of pigs and skins from dead calves. (l) Prior to 1971-72, figures include an estimate for non-commercial egg production. (m) Comprises value of whaling, pearling, molluscs and aquatic reptiles. * Revised.

⁽a) For 6 months ended 30 June, (b) Appraised price (including adjustments) of greasy wool handled by the Central Wool Committee.

⁽b) Exports negligible; average Metropolitan Market price shown. (c) Severe drought year.

No. 49 - MONTHLY AVERAGE PRICES OF FRUIT: METROPOLITAN MARKETS, 1972-73

NOTE. The average prices shown in this table have been computed from a systematic sample of auctioneers' records of fruit sold on the auction floor at each sale conducted at the Metropolitan Markets. Where the volume of sales of a particular commodity in any month does not reach a significant proportion of sales for the year, a price has not been shown.

⁽a) In addition to water supplies shown in the preceding tables, the operations of some local government authorities, and supplies by the Forests Department and sawmilling companies to mill towns, a number of privately operated water supply schemes serve towns in the North-West of the State. At 30 June 1973, 5 such schemes supplied water to 9 towns for a consumption for the year of 7,932,475 cubic metres. (b) Including supplies to railways, mines and shipping. (c) Connected to comprehensive water scheme during 1971-72.

NOTE. In addition to the preceding publications, a number of bulletins which deal exclusively with this State are produced by the Commonwealth Statistician, Canberra, who also issues many publications which contain particulars for Western Australia as a component of Australian totals. A complete list of all publications currently issued by the Central and the various State Offices of this Bureau appears in 'Publications of the Australian Bureau of Statistics' issued by the Commonwealth Statistician, copies of which are available free of charge from the Western Australian Office at the address shown on page 98.

BUREAU OF CENSUS AND STATISTICS

CONFIDENTIAL

AG. CENSUS 1

WESTERN AUSTRALIA

Please quote this Reference Number in all correspondence.

For Inquiries—
Telephone Perth 26 3377 or 26 3334 or call at Bureau, 1-3 St George's Terrace,

Acreage of the holding as shown by our records. If changed, indicate in Section A below.

Please amend Name and Address if incorrect.

AGRICULTURAL CENSUS SEASON 1972-73

This return is required under authority of the Census and Statistics Act, 1905–1966 and the State Statistics Act 1907–1956. Information supplied in individual returns is CONFIDENTIAL AND FOR STATISTICAL PURPOSES ONLY and will not be disclosed to any person or to any other Government Authority.

Please complete and return this form by 9 April 1973, or within 7 days of receipt, in the post-free envelope provided, to the DEPUTY COMMONWEALTH STATISTICIAN, 1–3 St George's Terrace, Perth, W.A. 6000.

W. M. BARTLETT

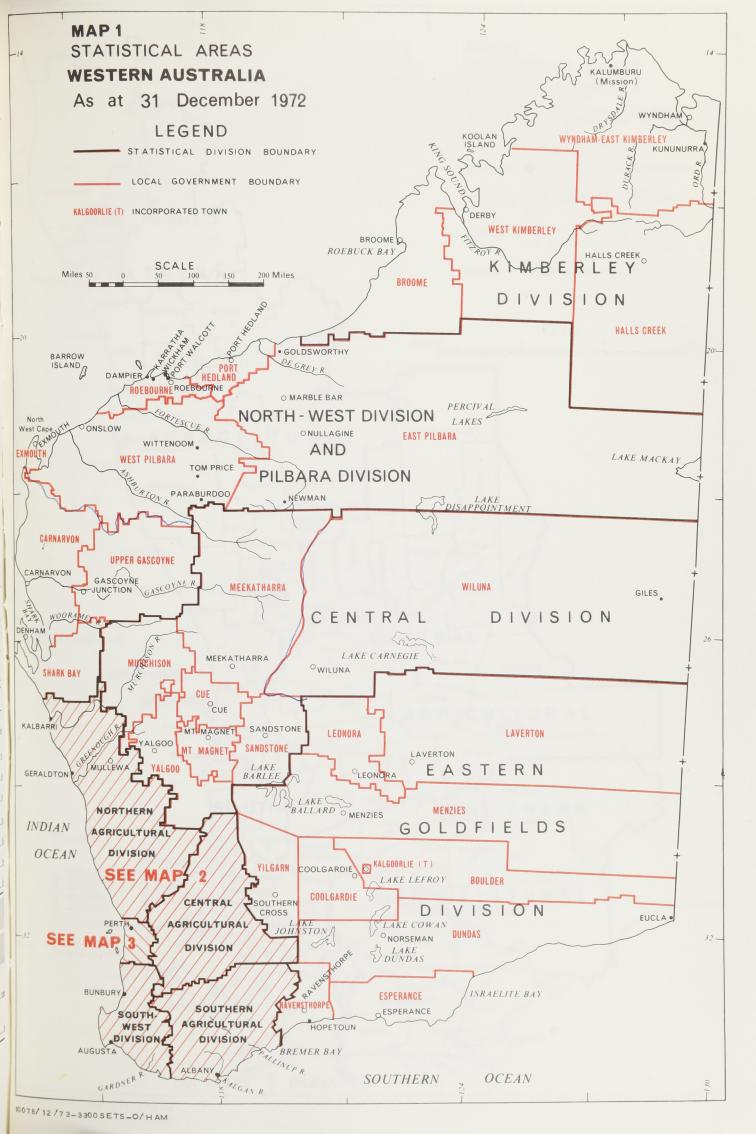

Deputy Commonwealth Statistician and Government Statistician

GENERAL INSTRUCTIONS

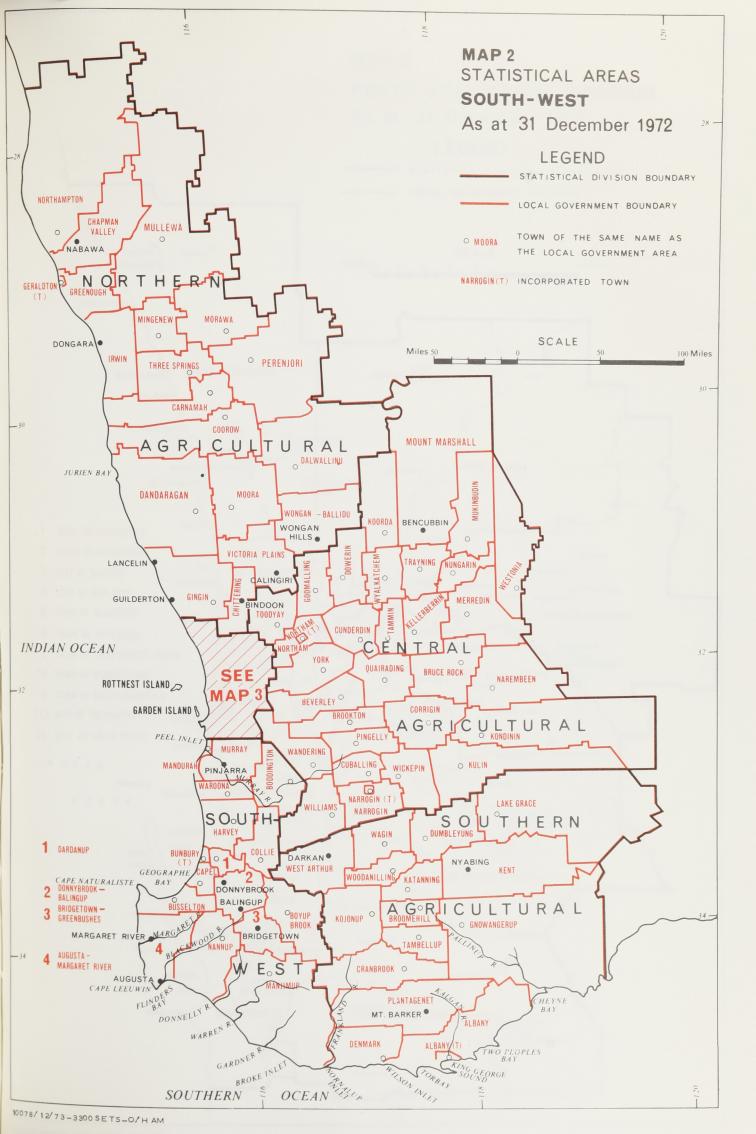

- The occupier (owner, lessee or tenant) is responsible for the completion of this return. An occupier of more than one holding may submit a combined return if the holdings are in close proximity and are worked as one. If a combined return is submitted, attach uncompleted any other form received and indicate where the particulars relating to the holding specified have been included.
- Include ALL CROPS GROWN during the 1972-73 Season and ALL LIVESTOCK on the holding at 31 March 1973. The TOTAL PRODUCTION of the holding should be included whether grown by the occupier or sharefarmers, and whether sold, held for sale, retained for seed or other use on the holding, or otherwise disposed of.
- Where a holding has been wholly disposed of, figures given should relate to the period up to the date of disposal. Where part of the
 holding has been disposed of, figures given should include that part up to the date of disposal.
